

International Transport Forum's (ITF) Corporate Partnership Board (CPB)

Sharon Masterson
Manager, Corporate Partnership Board

Overview of the International Transport Forum

- Originally founded in 1953 as European Conference of Ministers of Transport, **2006 marked the creation of the International Transport Forum (ITF).**
- Currently, the ITF – **a politically autonomous intergovernmental organisation covering all modes of transport** – is comprised of 62 member countries and is administratively integrated at the OECD.
- Council of Ministers of Transport has a rotating annual presidency, with **Ireland** currently at the helm.
- The ITF works to promote **“Better Dialogue for Better Transport.”**

Overview of the Corporate Partnership Board

- The Corporate Partnership Board (CPB) is the International Transport Forum's (ITF) **official platform for engagement** with the private sector.
- With businesses at the cutting edge of a rapidly changing world of transport and mobility, **the CPB allows private sector actors to contribute their valuable business insights to policy discussions**, and provide an effective mechanism for collaboration on issues of common interest.
- In addition to these benefits, **Corporate Partners engage across different workstreams and participate in concrete projects** that produce research and findings through the ITF Corporate Partnership Reports series.
- Currently, the CPB is comprised of Corporate Partners across **relevant domains of transport including energy, finance and IT**.

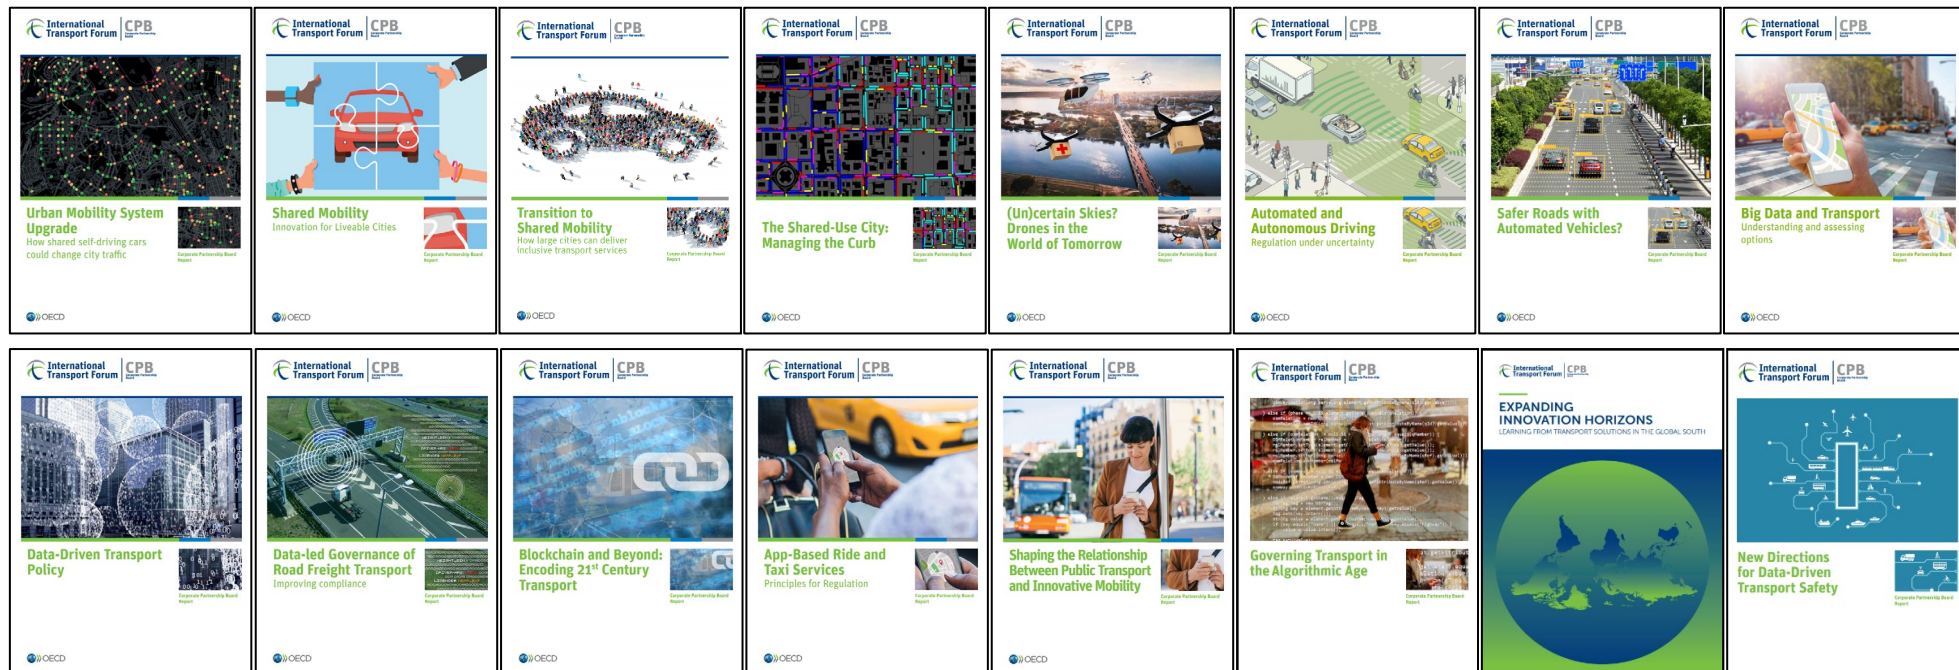

Current Corporate Partnership Board Members

CPB Workstreams

Workstream 1: Corporate Partnership Projects

Throughout the year, our Corporate Partners take on a variety of projects ranging from algorithmic governance to innovative mobility services; they can be categorized into four major themes: **Shared Mobility, Data Science, New Business Models, and New Technologies**

Algorithmic Governance
Artificial Intelligence
Automated Driving

Big Data
Data Science (Blockchain)
Digital Regulation
Drones

Innovative Mobility Services
New Mobility and Infrastructure
Mobility as a Service (Maas)

Workstream 2: Decarbonising Transport Initiative

Overview

- The **Decarbonising Transport (DT) initiative promotes carbon-neutral mobility** to help stop climate change, providing decision makers with the tools to select CO₂ mitigation measures that best deliver on their climate commitments.
- This initiative was **launched in 2016 with core funding from the Corporate Partnership Board**, uniting more than 70 governments, organisations, institutions, foundations and companies.
- The assessments of the DT initiative are grounded in **data analysis and advanced modelling techniques** employed by the ITF.

Transport Climate Action Directory

- Launched in July 2020, the [Transport Climate Action Directory](#) is an online database of current measures employed to reduce transport CO₂ emissions.
- The **Directory contains more than 60 different mitigation actions – which include CPB input** – along with the evidence-based need to assess their effectiveness.

Workstream 3: Gender and Transport

The CPB is committed to diversity and inclusion. At the request of our Corporate Partners, the CPB launched a workstream on gender to commemorate International Women's Day. The initiative kickstarted with a workshop on **Hiring and Retaining a Diverse Workforce** highlighting the importance of gender diversity within the transport sector.
